TITLE : SEAL MATERIAL FOR AUTOMOBILE
BODY PANEL AND MANUFACTURING
METHOD OF THE SAME

ABSTRACT : PROBLEM TO BE SOLVED: To provide seal material for an automobile body panel optimized in a heat receiving efficiency of a foamed material and a cavity seal efficiency, and a manufacturing method thereof.

SOLUTION: This seal material is comprised of foamed material 1 having a heat foaming property and a base member 2 supporting a periphery of the formed material 1. A protrusive streak 5 is formed on a periphery of the base member 2 and supports the foamed material 1 in such a manner that at least a part of the protrusive streak 5 is covered. Accordingly, a small quantity of the foamed material 1 is retained in a vicinity of a boundary surface with a body panel 11 where a seal function is required and a heat receiving efficiency is improved.
